

DRY CREEK SEWER CO.

Treating Every Drop Right

Dear Dry Creek Ranch Homeowner,

As an integral part of the Dry Creek Ranch water conservation efforts, Dry Creek Sewer Company (DCSC) is pleased to be your private wastewater reclamation company. Using world-class technology, we clean sanitary household waste like laundry, bathing, and toilet wastewater right here in Dry Creek Ranch. We use advanced technology involving biologic processing, ultrafiltration membranes (with pores small enough to filter even viruses), ultraviolet light treatment, and carbon air treatment. More dated and less environmentally friendly technology that is still largely in use in the Treasure Valley involves raw sewage lagoons, leech fields, septic systems, and discharge of effluent into the Boise River.

We've recently invested in major capital improvement projects, and we want you to understand how these features make us different from other wastewater treatment systems:

Limited Chemicals
And Additives

Smaller Footprint Than Circular
Clarifiers And Lagoons

Reduced Odor

Less Energy
Consumption

Ability To Land Apply Instead Of
Releasing To A Local Stream Or
River

Clean Water For
Irrigating Crops And
Landscape

Recent efforts to make our wastewater treatment system best-in-class have been important investments to match the pace of our community's growth. Effective January 1st, 2022, sewer rates will see an increase for usage. Please see the insert in your monthly bill.

We know these vital upgrades might be unseen by you and your family, but rest assured these improvements provide major value and support to our water and sewer infrastructure that allows us to continue growing with our community and operating with the best levels of quality. We appreciate your involvement in our community.
